

Task 1B: Test Strategy

Date of Test	Component to be tested	Type of test to be carried out	Prerequisites and dependencies
23/02/2026	Account Registration	Black-Box functional testing using normal data (valid name, valid email, strong password) to confirm account creation	Database connection active
23/02/2026	Account Registration	Black-Box functional using erroneous data (invalid email format, weak password), and ensure it rejects the registration	Validation Rules for email and password
23/02/2026	Account Registration	Boundary testing with Minimum and Maximum length characters for all fields.	Field length defined in Back-end and Front-end.
23/02/2026	Account Registration	Validation testing without any data on fields to ensure proper error message appears	Presence checks for fields
23/02/2026	Account Registration	Validation testing using extreme data to test system robust	Input sanitisation implemented
23/02/2026	Account Registration	White-Box testing of registration logic to confirm correct decision paths are followed	Source Code accessible for inspection
23/02/2026	Account Registration	Integration testing to confirm users data is passed from the Front-end to the Back-end database	Database tables created and linked correctly
23/02/2026	Account Registration	Security testing to ensure passwords or sensitive data are not stored in plain text and instead are fully encrypted	Password encryption implemented
23/02/2026	Account Registration	User Interface testing to verify feedback messages and accessibility features are consistent across browsers	Error and success messages implemented
23/02/2026	Login	Black-Box functional testing using normal data to confirm successful login	User account exists in the database. Authentic login implemented
23/02/2026	Login	Black-Box functional testing using erroneous data to ensure access is denied	Password comparison logic implemented

[illegible]
